EDUCATION

Georgia Institute of Technology, College of Computing

Atlanta, Georgia

B.S. in Computer Science, Minor in FinTech

May 2026

- Concentration: Intelligence & Modeling and Simulation

M.S. in Computer Science

May 2027

- Concentration: Machine Learning
- Relevant Coursework: Machine Learning, Artificial Intelligence, Data Structure & Algorithms, Database Systems, Derivative Securities

Cumulative GPA: 3.90

SKILLS & INTERESTS

Programming: Python, Java, TypeScript, JavaScript, SQL, Terraform, React, HTML/CSS

AI/ML: PyTorch, TensorFlow, Pandas, SciPy, Llama 3

Cloud & Systems: AWS, Docker, Kubernetes, REST APIs, Snowflake

Tools: Git, JIRA

Interests: Blockchain, Digital Assets, Distributed Systems, Web3

WORK EXPERIENCE

Cox Automotive

Atlanta, Georgia

Software Engineer Intern (Java, Terraform, AWS, Python, REACT, MCP)

May 2025 – August 2025

- Built a containerized Node/TypeScript ingestion service on AWS ECS to process thousands of vehicle records daily from Snowflake
- Implemented third-party pricing validation to reduce discrepancies in internal pricing systems
- Introduced feature flags during API migration to support new integrations and legacy Mashery consumers, maintaining backward compatibility
- Designed an AI-powered Slack bot to flag epic/milestone mismatches and post Rally summaries, eliminating 3–4 manual review sessions per sprint
- Developed backend services integrating REST APIs, AWS cloud services, and legacy AS400 systems to support real-time inspection workflows

Georgia Tech Vertically Integrated Projects Program

Atlanta, Georgia

Law, Data & Design Lab

August 2024 - Present

Student Researcher (Python, Llama3)

- Led development of an AI-powered document summarization pipeline for civil rights litigation to support judicial decision-making
- Built NLP workflows in Python using Llama3 to structure and analyze legal documents
- Improved document processing consistency and review efficiency through model evaluation and iteration

Georgia Tech Institute of Technology College of Computing, Course: Discrete Mathematics

Atlanta, Georgia

Undergraduate Teaching Assistant

January 2024 – Present

- Lead Discrete Mathematics recitations for 500+ students per semester and develop assignments and exams
- Analyze grade distributions and survey data to improve curriculum clarity

Georgia Tech Research Institute

Atlanta, Georgia

Robotics Research Intern (Python, Robot Operating System)

June 2023 – July 2023

- Designed and programmed a robotic gripper system to automate well-plate collection for stem cell research
- Integrated Raspberry Pi hardware with coordinate-mapping algorithms for robotic arm control
- Created CAD models for precision end-effector components

Georgia Tech Research Institute

Atlanta, Georgia

Software Development Intern (REACT, JavaScript)

June 2022 – July 2022

- Migrated Angular applications to React to improve performance and user experience
- Built reusable React components that increased user satisfaction by 20%

PROJECTS

Foreign Exchange Predictor

Atlanta, Georgia

Developer

February 2024 – March 2024

- Built machine learning models (linear regression, neural networks) to forecast foreign exchange rates
- Deployed models through a React and Jupyter interface to visualize performance metrics

Amazon Cart Blacklisting Program

Johns Creek, Georgia

Lead Developer

June 2023 – July 2023

- Developed a Chrome extension that detects allergen-related keywords during checkout and alerts users in real time
- Implemented keyword database scraping logic to personalize user alerts

EXTRACURRICULAR/LEADERSHIP

Georgia Tech Investments Committee

Atlanta, Georgia

Senior Financial Analyst

April 2024 – Present

- Produced financial reports and stakeholder presentations to support portfolio strategy
- Applied statistical models to drive a 15% portfolio value increase within one year
- Lead financial sector team managing and allocating \$2M across asset categories
