Hiring Team
Gemini

Dear Hiring Manager,

I am writing to show my interest in the Software Engineering Intern (Summer 2026) position at Gemini. As a Computer Science student at Georgia Tech with a concentration in Intelligence and Modeling/Simulation along with a minor in FinTech. I am drawn to Gemini's mission to connect traditional financial systems with decentralized networks systems. I am eager to contribute to building reliable, high-performance systems in the ever evolving digital space.

Through my academic work and project experience, I developed a strong foundation in data structures and algorithms along with system design. I applied these concepts in Python-based backend projects, where I built scalable systems. Additionally, in my machine learning and systems coursework, I solved complex technical problems and evaluated system performance to determine solutions.

Outside of academis, my industry experience strengthened these skills. As a Software Engineering intern at Cox Automotive, I contributed to backend services that processed thousands of records daily and supported cloud-based infrastructure. This experience deepened my understanding of building reliable, secure systems at scale.

The engineering culture at Gemini draws me because it emphasizes developing secure platform infrastructure while supporting collaborating across teams. I am motivated by solving problems that directly impact users, and I would welcome the opportunity to contribute my technical skills, curiosity, and work ethic to Gemini's engineering team.

Sincerely,
Akshaj Evuru
